Engineering Tripos Part IIB, 4I15: Mobile Robot Systems, 2020-21

Leader
Dr A Prorok [1]

Lecturer
Dr A Prorok [1]

Lecturer
Dr F Iida [2]

Lecturer
Dr F Forni [3]

Timing and Structure
Lent term. Lectures and coursework. Assessment: 100% coursework.

Prerequisites
4M20 useful; 3F2 useful; 3F3 useful

Aims
The aims of the course are to:

- This course teaches the foundations of autonomous mobile robots, covering topics such as perception, motion control, and planning.
- It also teaches algorithmic strategies that enable the coordination of multi-robot systems and robot swarms.
- The course will feature several practical sessions with hands-on robot programming. The students will undertake mini-projects, which will be formally evaluated through a report and presentation.

Objectives
As specific objectives, by the end of the course students should be able to:

- understand how to control a mobile robot;
- understand how a robot perceives its environment;
- understand how a robot plans actions (navigation paths);
- know paradigms of coordination in systems of multiple robots;
- know classical multi-robot problems and their solution methods;

Content
Robot motion and control. Kinematics, control models, trajectory tracking.
Control architectures. Sensor-actuator loops, reactive path planning.
Localization. Markov localization, environment modeling, SLAM.
Navigation. Planning, receding horizon control.
Multi-robot systems I. Centralization vs. decentralization, robot swarms.
Multi-robot systems II. Consensus algorithms, graph-theoretic methods.
Multi-robot systems III. Task assignment.
Multi-robot systems IV. Multi-robot path planning.

Further notes

Requirements:

Students are expected to have laptops running Linux, with installations of ROS Kinetic and Gazebo. An installation guide will be provided.

Coursework

Students will be expected to hand in two reports and attend an individual questioning session.

<table>

<th>Due date &amp; marks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Learning objectives:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The assignments will consist of two elements: (1) experimental work using a robot simulator and real robots, and (2) theory / understanding. The exercises will require data collection and analysis. The balance between practice and theory will depend on the exercise topic. Each student will submit a written report.</td>
<td>Individual Report anonymously marked</td>
<td>February 2021 60% (30% each assignment)</td>
</tr>
<tr>
<td>Each assignment will be marked on a scale of 0-100, and will compose 30% of the mark.</td>
<td></td>
<td></td>
</tr>

<th>Format</th>
<th>Due date &amp; marks</th>
</tr>
</thead>
<tbody>
<tr>
<td>A set of proposals will be announced at the start of term. Students will form groups of 2-3 and select a project proposal. Each proposal will include a core and a set of extensions; Engineering students will be expected to complete the extensions.</td>
<td>Individual Report anonymously marked</td>
<td>April 2021 40%</td>
<td></td>
</tr>
