Q1 (a) $e < 0.01077$

Q2 (b) $I_0 = \frac{\gamma_i \Sigma_f \phi_0}{\lambda_i}; X_0 = \frac{(\gamma_x + \gamma_i) \Sigma_f \phi_0}{\lambda_x + \sigma \phi_0}$

(d)
$$X = \frac{(\gamma_x + \gamma_i) \Sigma_f \phi_0}{2\lambda_{eff}} + \frac{\gamma_i \Sigma_f \phi_0}{2(\lambda_{eff} - \lambda_i)} \exp(-\lambda_i t)$$

$$+ \left[\frac{(\gamma_x + \gamma_i) \Sigma_f \phi_0}{\lambda_x + \sigma \phi_0} - \frac{(\gamma_x + \gamma_i) \Sigma_f \phi_0}{2\lambda_{eff}} - \frac{\gamma_i \Sigma_f \phi_0}{2(\lambda_{eff} - \lambda_i)} \right] \exp(-\lambda_{eff} t)$$

where $\lambda_{eff} = \lambda_x + \frac{1}{2}\sigma\phi_0$

Q3 (c) (ii) $\frac{37}{96} T_1$

Q4 (b) 32.69 te

(c) 220.66 te; 111.7 te SWU
